installation instructions

street airflow system for 2006/2007 bmw k1200gt

part number 76015

©2007 by evoluzione.net, inc.

this **evoluzione cyclesports street airflow system** has been designed to add horse power and torque by removing the restrictive factory air tube and replacing it with a cleanable high flow air filter.

introduction

this **evoluzione cyclesports street airflow system** is easy to install by carefully following the instructions. read all instructions first to familiarize yourself with the parts and procedures.

installation

step 1. using a torx t-25 tool, remove the battery cover, right side fairing and tank cover.

step 2. remove the two retaining clips holding the right intake air pipe. remove the intake air pipe from the holder at the intake air silencer and from the rubber grommets.

step 3. install the ring with filter into the holder at the intake air silencer and insert the two retaining clips to hold it in place (see photo one).

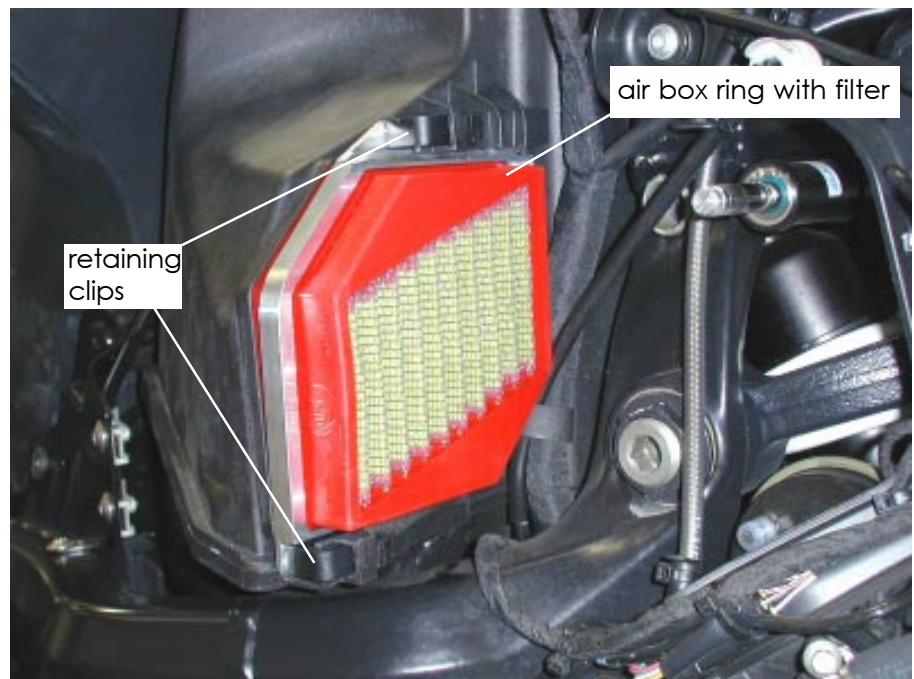

photo one

step 4. reinstall the tank cover, fairing and battery cover.

tool list

torx t-25 wrench
