installation instructions

performance air filter for 2008 can-am spyder

part number 78000

©2008 by evoluzione.net, inc.

this **evoluzione cyclesports performance air filter** has been designed to add horse power and torque by replacing the restrictive factory air filter. another great benefit is that this performance filter offers a much better seal in the stock air box than the stock paper air filter.

introduction

this **evoluzione cyclesports performance air filter** is easy to install by carefully following the instructions. read all instructions first to familiarize yourself with the parts and procedures.

installation

step 1. raise the seat. using a t-30 torx wrench and a small flat blade screwdriver, remove the left & right upper side panels & the central panel. please refer to the factory owner's manual for more information.

step 2. release the clamps holding the air filter housing cover and disconnect the small i.a.c. (idle air control) hose.

step 3. carefully slide the air filter cover towards the right side of the bike.

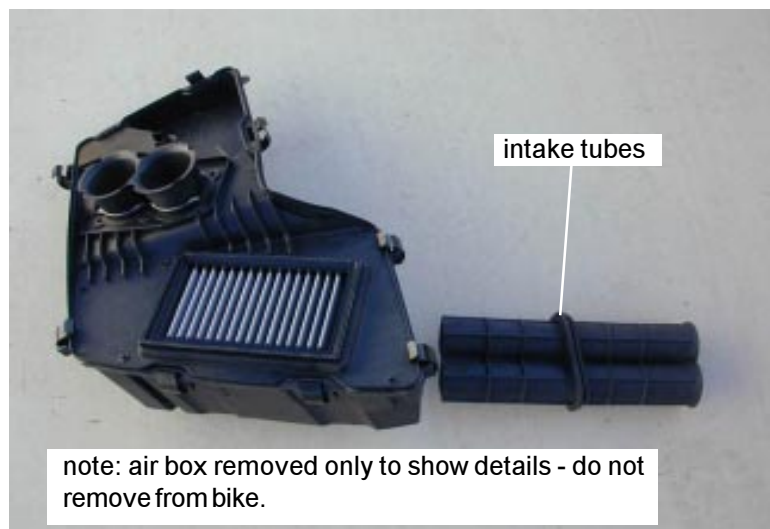

step 4. check the air box for any oil and/or dirt. with a clean rag, wipe the interior of the housing clean.

step 5. remove the stock air filter and install the **evoluzione cyclesports performance air filter**.

note: for even greater performance, remove the rubber intake tubes from the front of the air box. this is done by pulling the rubber tubes into the interior of the air box

and removing through the air filter opening (please see photo).

step 6. reinstall the air box cover, reconnect the i.a.c. hose and reinstall the body panels.
