installation instructions

banjo bleeder bolt (m10 x 1.0mm)

part number 90040

©2006, 2002, 2001 by evoluzione.net, inc.

this **evoluzione cyclesports banjo bleeder bolt** allows you to easily bleed your hydraulic clutch system.

introduction

this **evoluzione cyclesports banjo bleeder bolt** is easy to install by carefully following the instructions. read all instructions first to familiarize yourself with the parts and procedures.

installation

caution: brake fluid is highly corrosive. if it comes into contact with a painted surface, immediately wipe off and thoroughly wash with water.

step 1. turn the handlebars to the left to bring the hose end of the master cylinder to it's highest point. carefully place towels around the surrounding area to catch any leakage (please see photo one).

step 2. with a 14mm wrench, carefully loosen the stock banjo bolt. if fluid starts to drip, place a small container underneath the connec-

tion to catch the fluid.

step 3. remove and discard the stock banjo bolt and the two crush washers (please see photo two).

step 4. slide one of the supplied crush washers onto the end of the banjo bleeder bolt. insert the banjo bleeder bolt through the clutch hose and install the other supplied crush washer.

step 5. carefully thread the banjo bleeder bolt into the master cylinder, being careful not to strip the threads. with a 14mm wrench, carefully snug up the bolt but do not overtighten (please see photo three).

step 6. fully bleed the clutch system, starting with the master cylinder and then the slave cylinder.
