installation instructions

billet clutch hub stabilizer for 1991/ 2005 6 speed ducati w/dry clutch

part number 90051

©2006, 2005, 2003 by evoluzione.net, inc.

this **evoluzione cyclesports billet clutch hub stabilizer** has been developed for high performance street and racing use on 1991/2005 6 speed ducati with dry clutches. an advantage of this system is more consistent clutch loading due to the six clutch hub standoffs now being tied into one solid billet spring retainer. this kit is easy to install and includes all necessary hardware for installation.

introduction

the **evoluzione cyclesports billet clutch hub stabilizer** is easy to install by carefully following the instructions. [read all instructions first to familiarize yourself with the parts and procedures.](#)

clutch stabilizer installation

step 1. if equipped, remove the right side fairing.

step 2. remove the four screws to free the clutch cover and set the cover aside.

step 3. slacken the six pressure plate

screws evenly and in a diagonal sequence. remove the screws, the springs, and the spring retainers.

step 4. install the springs onto the towers of the clutch stabilizer.

step 5. position the stabilizer and install all six supplied screws.

step 6. screw them in evenly in a diagonal sequence. make sure the screws are tighten securely.

step 7. reinstall the clutch cover

and the fairing if removed.
